JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

THE GEOLOGY OF INDIANA.—The thirteenth annual report of the geology and natural history of this State, by John Collett, State geologist, fills a volume of 264 pages, with thirty-nine plates. The large folding geological map of the State has been prepared from the labors of Owen, Lawrence, Brown and Cox, as well as the present geologist and his assistants. The report of Mr. Leo Lesquereux is entitled, Principles of Palæozoic Botany, and is a most useful manual by the leading authority on this subject. It gives character and value to the report, and is fully illustrated. It will be easily understood by the lay reader. In the same useful direction is Dr. C. A. White's Fossils of the Indiana rocks, No. 3, which treats of the fossil animals of the coal measures of the State. Besides these chapters a due amount of space is devoted to the economic geology of the State by the State geologist and his assistants.

RECENT BOOKS AND PAMPHLETS.

- Pelzeln, Aug.*—Brasilische Säugethiere. Resultate von Johann Natterer's Reisen in 1817-1835. Wien, 1883. From the author.
